• This product is a system(s) component.

This product does not function properly when independent; to avoid malfunctions, be sure to connect it to the prescribed system component(s), otherwise damage may result.

This product's instructions are contained within the instruction manual of the related system

The manual is packed with those component(s).

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

3. SCHEMATIC AND PCB CONNECTION DIAGRAMS

NOTE FOR SCHEMATIC DIAGRAMS

(Type 4A)

- When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".
- Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:

Unit: $k:k\Omega$, $M:M\Omega$, or Ω unless otherwise noted.

Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise

noted.

Tolerance: (F): $\pm 1\%$, (G): $\pm 2\%$, (K): $\pm 10\%$, (M): $\pm 20\%$ or $\pm 5\%$ unless otherwise noted.

4. CAPACITORS:

Unit: p:pF or µF unless otherwise noted.

Ratings: capacitor (μF)/ voltage (V) unless otherwise noted. Rated voltage: 50V except for electrolytic capacitors.

5. COILS:

Unit: m:mH or µH unless otherwise noted.

6. VOLTAGE AND CURRENT:

☐ or - V:

DC voltage (V) in PLAY mode unless otherwise noted.

⇔ mA or ← mA:

DC current in PLAY mode unless otherwise noted. Value in () is DC current in STOP mode.

7. OTHERS:

Ø or Ø: Adjusting point.

• _ = : Measurement point.

- The mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.
- 8. SCH—□ ON THE SCHEMATIC DIAGRAM:
 - SCH—☐ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)
- 9. SWITCHES (Underline indicates switch position):

 When ordering resistors, first convert resistance values into code form as shown in the following examples.
 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = Ex.1

8. DISASSEMBLY

8.1 FRONT PANEL

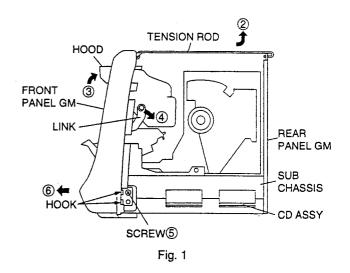

- (1) Remove the BONNET.
- ② Remove the TENSION ROD.
- ③ Open the HOOD.
- 4 Remove the LINK.
- (5) Remove the SCREWS, under both side panels, fixing the FRONT PANEL and SUB CHASSIS.
- (6) Remove the FRONT PANEL toward you while removing the HOOK on the side panel.

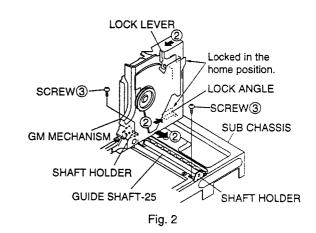

Caution:

- Be careful not to damage the FRONT PANEL by the HOOK on the side panel of the BONNET when installing the BONNET.
- Pull out the power plug from the wall outlet after confirming that the STANDBY indicator lights. (The GM MECHANISM is locked in the home position.)

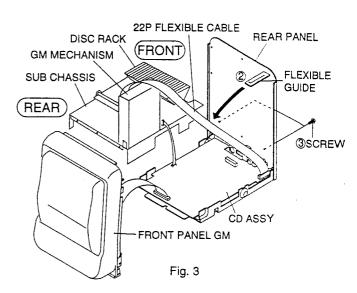

- ① Open the HOOD.
- ② Move the GM MECHANISM to the center position while pushing the LOCK LEVER and LOCK ANGLE in the direction indicated by the arrow (release the home lock).
- ③ Remove the SCREW of the SHAFT HOLDER.
- Remove the GM MECHANISM together with GUIDE SHAFT-25.

8.3 BOARD DIAGNOSIS

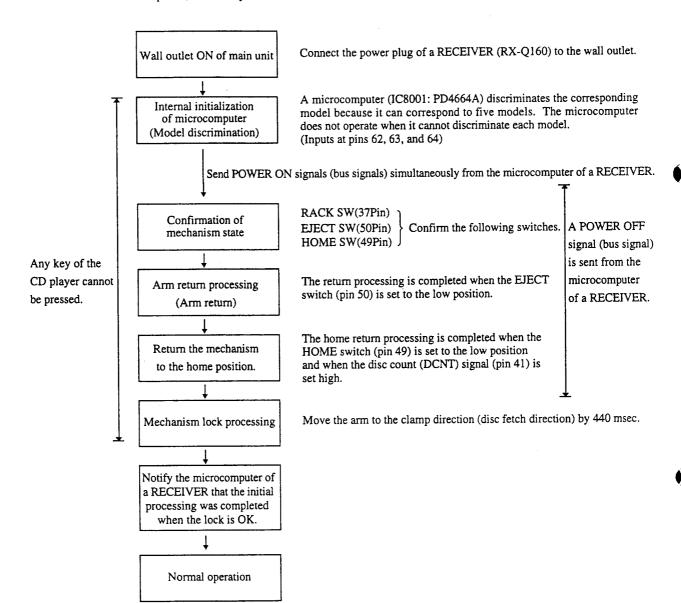

- ① Remove the FRONT PANEL.
- ② Disconnect a FLEXIBLE CABLE 22P from the FLEXIBLE GUIDE.
- ③ Remove the two SCREWS (SUB CHASSIS fixing SCREWS) on the REAR PANEL.
- Remove the GM MECHANISM together with the SUB CHASSIS, rotate the GM MECHANISM reversely in front and in the rear, and put it on the left of the product.

9. OPERATIONAL DESCRIPTION

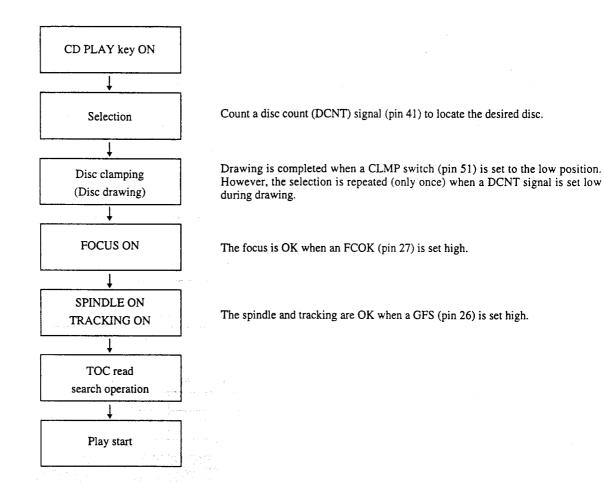

9.1 SETUP OPERATION FROM WHEN POWER IS TURNED ON

• If the unit is NG during each operation, the operation is performed again. If the operation is not completed at that time, the unit stops as NG. When the door is opened, the standby state is entered until the door is closed.

9.2 OPERATION IN PLAY MODE

• The operation from when the function switch is set to the CD position and when the mechanism is put in the home position (standby state) is described below.

10. NEW FUNCTIONS

10.1 BEST COLLECTION MEMORY

<Operation>

The tunes (a maximum of 25 tunes) during play are memorized when the (BEST)

button is pressed in the PLAY mode.

The memorized tunes are played back in the order of memory when the (BEST

button is pressed in the stop mode.

The contents of memory are maintained even if the standby mode is entered.>

10.2 PREVIOUS DISC SCAN

<Operation>

The number of a disc (a maximum of 25 tunes) that is usually played back is automatically memorized in time sequence. (The contents of old memory are sequentially cleared when 25 tunes are exceeded.)

(Example: Memory method)

	Memory order (= Scan playback order)	1	2	3	4		24	25
•	disc No.	22	8	9	15		4	1
above	state is memorized and disc 5 is played b	ack.	. \		$\langle \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$			′ >
		ack.	1	1	1	\	\	"1"
		ack.	2	3	4			"1"

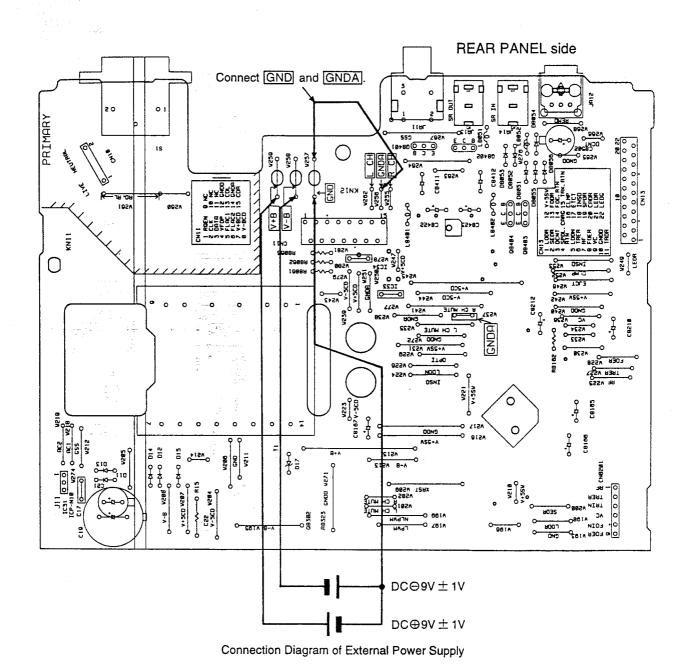

The contents of memory are shifted, and the contents of old memory are sequentially cleared when 25 tunes are exceeded.

Highlight scan operation is performed in the order of newly memorized tune when the HI-LITE button is pressed in the stop mode. When the PLAY button is pressed in the scan state, the scan operation stops and the disc is played back.

<The contents of memory are maintained even if the standby mode is entered.>

11. OPERATION OF SINGLE CD PLAYER

The CD player can independently operate by supplying a DC power to the power circuit in the CD assy from the outside.

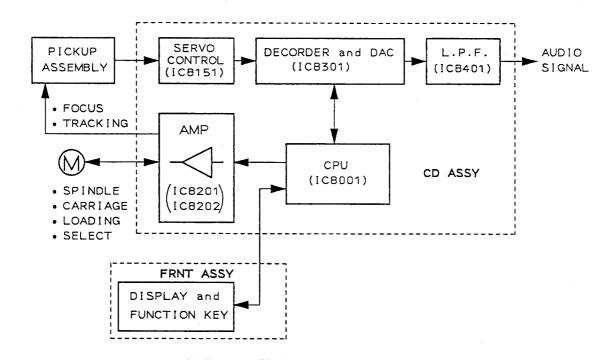

- CAUTION -

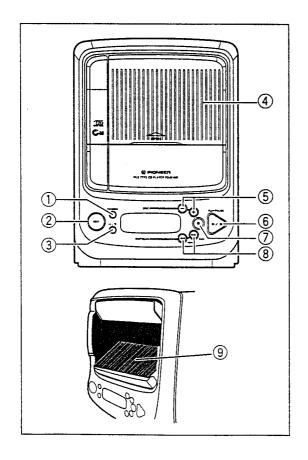

A fluorescent lamp does not light because no power is supplied to the fluorescent lamp.

Use a REGULATED DC POWER SUPPLY with a current capacity of more than 1A as the external power to be connected.

CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by " " are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	\rightarrow	56 × 10 ¹ → 561	RD1/4PU5611J
$47k\Omega$	\rightarrow	47 × 10³ → 473	RD1/4PU473J

$I\Omega$	\rightarrow	IR0	RSIP I ROK

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors). 5.62k $\Omega \rightarrow 562 \times 10^{1} \rightarrow 5621$
